- My Portfolio

Education

- B.Sc. in Biomedical Engineering 2022 – 2026
 - Deep Learning
 - Image Processing
 - Signal Processing
 - Tissue Engineering

Technical Skills

- Languages & Web: TypeScript, JavaScript, Python, React, Next.js, Tailwind CSS, Node.js
- AI & LLM: LangChain, LangGraph, Vercel AI SDK, LLM's APIs, RAG, E2B, Langfuse
- Backend, DB & Cloud: PostgreSQL, Neon, Drizzle ORM, Upstash Redis, Inngest, NextAuth, Vercel
- Deep Learning: PyTorch, YOLO, Computer Vision, Signal Processing (MATLAB)
- Tools & Testing: Git, Docker, Playwright, Jest

Soft Skills

- Rapid Self-Learning & Adaptability
- Complex Systems Architecture
- End-to-End Product Ownership
- Cross-Functional Problem Solving
- Data-Driven & Analytical Thinking
- Agile Execution & Prototyping

Profile

AI Engineer and Biomedical Engineering graduate dedicated to building high-impact SaaS and agentic AI platforms. Demonstrated success in translating complex research into scalable software, including reducing operational overhead by 40% and delivering diagnostic systems with 96.8% recall. A highly adaptable rapid-learner who continuously masters cutting-edge technologies to build end-to-end solutions that drive business and clinical value.

Academic Experience

Multi-Agent AI Decision System for Emergency Room Triage | Final Project

- Architected a "Council of Experts" Multi-Agent LLM system for automated ER triage
- Designed 5 AI agents mimicking a multidisciplinary team for robust decisions
- Achieved 88.0% accuracy, 87.3% F1-score, and 96.8% recall across 468 cases

Dental Caries Detection System | Deep Learning Course

- Developed a pipeline using YOLOv8 for precise object detection in dental X-rays
- Implemented Transfer Learning to adapt for medical feature extraction
- Applied augmentations on a 2,706-image dataset to enhance robustness
- Optimized hyperparameters for T4 GPUs, 97% Precision and 88.3% mAP50

WatchIT Medical Device | Engineering Design Course

- Led end-to-end R&D of an Arduino based device, developing embedded C software for real-time thermal sensing
- Executed mechanical design in SolidWorks and iterative prototyping cycles based on direct clinical feedback

Work Experience

Business Developer | Libero 2022 - Present

- Analyzed retail markets to adapt international niche perfume brands locally
- Leveraged procurement data insights to optimize boutique retail strategies
- Established strategic global vendor partnerships and wholesale agreements
- Drove 75% sales growth via targeted brand procurement and GTM planning
- Engineered a Marketing Operations Platform to automate analytics and planning

Data Operations Student Position | Leumi Partners 2026

- Automated the reconciliation process between books and investment system
- Processed massive datasets to identify and resolve critical system discrepancies
- Designed scalable workflows for comprehensive financial variance analysis

Full-Stack Developer | Kesefly.co.il 2025 - 2026

- Engineered a financial SaaS platform (Next.js/TypeScript) for real-time processing
- Led the development, from architecture to deployment, using AI Tools
- Automated workflows via iOS integrations and AI, reducing overhead by ~40%
- Developed a management interface with orchestration to streamline operations

Web Developer & Graphic Designer | Combar 2017 - 2018

- Developed responsive web solutions (HTML/CSS/JS)
- Executed precise graphic designs (Photoshop), integrating UI/UX principles

Military Service

Medical Organization Officer | IDF 2016-2020
